Dear Customer,

**Re: Harwin and Conflict Minerals.**

I can hereby confirm that Harwin are aware of the requirements of the industry to restrict and eliminate the use of certain materials originating from mines that support the conflicts in, and surrounding, the Democratic Republic of Congo. The materials currently in question are collectively known as 3TG: Tin (SN), Tantalum (Ta), Tungsten (W) and Gold (Au).

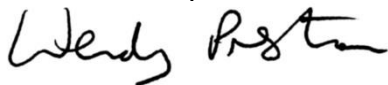

Firstly, I can confirm that Tantalum and Tungsten are not used in any of our products. However, Tin and Gold are used extensively. Harwin are currently working with their suppliers to ascertain our exposure to potential minerals sourced from conflict mines. At this time, we have almost all the information back, and have not found any source originating from these mines.

This project is not fully complete, and we continue to work with our existing and any new suppliers to confirm and complete our route towards being conflict-free.

Conflict Mineral Reporting Templates (CMRT) of our current status are available for download from our [Legislation Documentation page](#) – the CMRT for the Company is the second document listed. To find a Product-specific CMRT, please [search for the part number](#) on our website, and the CMRT (if available) will be located on the Product Page. If you are unable to find the product you require, please contact [leadfree@harwin.co.uk](mailto:leadfree@harwin.co.uk).

If you have any further questions regarding this letter, please do not hesitate to contact me.

Yours faithfully,

Mrs Wendy Jane Preston, BEng (Hons)  
Technical Marketing Engineer & Legislation Officer
