

Environmental Policy

Clarke & Severn Electronics commitment is to the environment and health and safety of our employees.

We comply with all applicable laws and regulations in the handling of, storing and disposing of chemicals and reduce, and where possible eliminate, hazardous and non-hazardous waste through source reduction and recycling. All wastes will be handled and disposed of through safe and responsible methods.

Trade Waste has been separated into non recycled and recyclable components being paper and cardboard, metal and hard plastics and soft plastics. We have partnered with our garbage Contractor to collect garbage using dedicated bins and disposing of the garbage accordingly.

Power consumption has been reduced by installing energy efficient LED lights in the office, warehouse and production areas.

Redundant electronic equipment is recycled through the local council recycling centre.

Hazardous waste is handled as per manufacturers' recommendations.

We strive to continually improve our environmental performance by periodically reviewing our Environmental Policy.

Glenn Clarke

Managing Director
